Data Analytics & Visualization Report

1. Background of Dataset

This dataset contains sales transactions recorded between January 2022 and August 2022. It includes 1,094 records with attributes such as Date, Country, Product, Sales Person, Amount (Revenue), and Boxes Shipped. The dataset represents sales performance across 6 countries, 22 products, and 25 salespeople.

2. Data Source

The dataset was downloaded online as an easy dataset to visualize for Data Analytics & Visualization. It simulates real-world sales transactions across multiple regions and products.

3. Dataset Summary Statistics

Total Revenue: 6,183,625

Total Boxes Shipped: 177,007

Countries: 6

Products: 22

Salespeople: 25

Date Range: Jan 2022 – Aug 2022

4. Key Insights

1. Australia generated the highest revenue, indicating strong market performance.
2. New Zealand recorded the lowest revenue, suggesting a smaller or less active market.
3. Revenue trends show peaks in January and June, indicating possible seasonal demand.
4. Top products such as 'Smooth Silky Salty' generate the highest revenue.
5. Sales performance varies significantly across salespeople.
6. There is a positive relationship between boxes shipped and revenue.
7. Revenue distribution varies widely, indicating high variability in transaction values.
8. Certain products perform better in specific countries.
9. Average revenue provides better understanding than total values alone.
10. Standard deviation shows variability in revenue across transactions.
